## FOREWORD

The Department of Water Resources, as Watermaster, is pleased to submit this report on water supply conditions in the West Coast Basin during the 2011-2012 fiscal year. The report is prepared annually in accordance with the provisions of the Los Angeles County Superior Court Judgment in the West Coast Basin. The Judgment, together with Part 4, Division 2, of the California Water Code, authorizes this publication and the Department's administration of the Watermaster Service Area.

In 2011-2012, the Parties pumped 45,272 acre-feet of their 77,033 acre-feet of allowable extraction, and kept 12,103 acre-feet as carryover. Parties with non-consumptive use permits pumped 1,853 acre-feet.

This report includes information not only on groundwater extractions but also on the use of imported water and recycled water, the recharge operations, the administration of the water exchange pool, and the finances of the Watermaster Service. The first part of the report is the discussion of the conditions in the Basin, the second part is the tables, and the third part is the figures.

The Watermaster appreciates the assistance and support received from the many public and private organizations and individuals whose contributions were essential to this report. The success of Watermaster Service is dependent on continued cooperation and communication between the Watermaster and the water users.

I want to pay tribute to Milan Cernosek, who, before his untimely death on August 1, 2012, was the Chief of the Watermaster Section and a Deputy Watermaster. This report is dedicated to his memory.

Mark Stuart, Chief  
Southern Region  
and Watermaster

### Introduction

The West Coast Basin (Basin) underlies 160 square miles in the southwestern part of the coastal plain of Los Angeles County. Figure 1 shows the location and boundaries of the West Coast Basin. The Basin is bounded on the west by the Santa Monica Bay, on the north by the Ballona Escarpment, on the east by the Newport-Inglewood Uplift, and on the south by the San Pedro Bay and the Palos Verdes Hills. Twenty incorporated cities and several unincorporated areas overlie the Basin. An essential portion of the water needed by the residents and industries in the area overlying the Basin is pumped directly from the groundwater in storage.

In 1945, when intrusion of sea water caused by declining water levels threatened the quality of the groundwater supply, legal action was begun to halt the overdraft and prevent further damage to the Basin. In 1955, the Superior Court of Los Angeles County (Court) appointed the Division of Water Resources as the Watermaster to administer an Interim Agreement,<sup>3</sup> and in 1961, the Court retained the Department of Water Resources (DWR) as the Watermaster of the final West Coast Basin Judgment (Judgment).<sup>4</sup>

<sup>1</sup> Includes water pumped for oil recovery production by Mobil Oil Corporation and Shell Oil Company and desalter production by California Water Service Company (Dominguez).

<sup>2</sup> Includes water imported by Los Angeles County Department of Public Works for use in the barriers.

<sup>3</sup> Department of Water Resources, Report on Watermaster Service in West Coast Basin Watermaster Service Area, Los Angeles County, California, August 1956, p. 3

<sup>4</sup> *California Water Service Company, et al. vs. City of Compton, et al.* case no. 506,806, August 22, 1961. Also see Paragraph XI of the current Judgment. In 1956, the Division of Water Resources of the Department of Public Works became the Department of Water Resources.

The Watermaster assists the Court administer and enforce the provisions of the Judgment.<sup>5</sup> Among other duties, the Watermaster monitors groundwater levels and extractions and reports all significant water-related events in the Basin to the Court and to the parties to the Judgment. The activities of the Watermaster are key components for the effective management of the groundwater in the Basin.

This report, which is required by the Judgment,<sup>6</sup> summarizes the activities of the Watermaster, the quantities of water used in the area overlying the Basin, the conditions of the groundwater supply, and the quantities of water extracted and replenished; it also includes a financial report for the 2011-2012 fiscal year.

### Water Use

Water supplies used in the area overlying the West Coast Basin include groundwater, imported water, and recycled water. Figure 2 shows the total water use (including groundwater, imported water, and recycled water) in the area overlying the Basin since 1933. Population increase and industrial growth in the area overlying the Basin caused water demand to increase substantially from 1943 to 1970 when growth and development leveled off. Prior to 1955, groundwater extractions met most of the demand. However, after the Judgment limited the amount of groundwater that could be extracted from the Basin, imported water became the largest component of the water supply in the area overlying the Basin.

Figure 3 shows the portions of groundwater, imported water, and recycled water used each month and the monthly rainfall during 2011-2012. Table 1 shows the gross amount of water (including groundwater, imported water, and recycled water) used in the area overlying the Basin. The total amount of water used was 249,884 acre-feet, 0.5 percent more than the amount used in 2010-2011.

**Extractions by Parties** The Judgment requires Watermaster to report all groundwater extractions from the Basin.<sup>7</sup> Once a month, each groundwater pumper reports its extractions to the Watermaster, and each water right account is revised by computation of (1) the amount pumped during the previous month, (2) the total amount pumped thus far during the current fiscal year, and (3) the amount that can be pumped during the remainder of the fiscal year. Every month, each pumper receives an updated copy of its account. Table 2 is a water rights accounting for the Basin.

Groundwater extractions by each party and by each well are shown in Table 3. Parties extracted a total of 47,124.21 acre-feet of water including three parties with non-consumptive use permits that extracted 1,852.67 acre-feet of water. Figure 4 shows the locations of the active extraction wells.

---

<sup>5</sup> Judgment Paragraph XI

<sup>6</sup> Judgment Paragraph XII, 6

<sup>7</sup> Judgment Paragraph XII, 7

**Overextractions** Table 4 shows overextractions. Five parties had a combined overextraction of 545.02 acre-feet.

**Extractions by Nonparties** There were no reported extractions by nonparties.

**Transfers of Adjudicated Rights** Table 5 shows the succession of Adjudicated Rights in the Basin. Table 6 shows transfers of Adjudicated Rights during 2011-2012. There were 12 water right leases totaling 8,852.06 acre-feet. Carson-Harbor Village Mobile Home Park sold 1.20 acre-feet of Adjudicated Right to Montrose Chemical Corporation of California. Western Water Service Company has zero Adjudicated Right, but it remains a party for the duration of its long-term lease agreement with Chevron USA, Inc., which expires on June 30, 2013.

Figure 5 shows samples of recommended lease and sale agreements. The Watermaster recommends that documents be prepared on 8-1/2 x 11-inch paper. Any necessary additions to the recommended agreement may be made by attaching another page.

In transferring water rights, parties must specify (1) the type of right being exchanged (i.e., Adjudicated Right, normal carryover, or drought carryover), (2) the amount of right to the nearest 0.01 acre-foot, and (3) the period of the lease, if applicable. Moreover, all leases must be made on a fiscal year<sup>8</sup> basis and be executed by the parties and received by Watermaster by June 30.

The Watermaster keeps a list of parties who have expressed interest in buying, selling, or leasing water rights. Any party wishing to be listed should call the Watermaster. This is not done as a Court-required function of Watermaster service. It is a courtesy informally administered to assist parties unable to resolve problems regarding an excess or deficiency of water rights. Watermaster makes no recommendation regarding transactions conducted relative to the use of this service. The names of all parties using this service are available at the Watermaster's office or at our website.<sup>9</sup>

**Exchange Pool** The Judgment authorizes an Exchange Pool to provide additional water rights to parties without sufficient water.<sup>10</sup> If a party's estimated water requirement for the following fiscal year exceeds its total available water supply, that party may request additional water from the Exchange Pool. Any party wishing to purchase water from the Exchange Pool must file the request with the Watermaster before April 1. If no requests are received by April 1, the Exchange Pool will not operate in the following fiscal year, and Watermaster will not process Exchange Pool forms. Table 7 shows that there were no requests for Exchange Pool water during 2011-2012.

**Non-Consumptive Practices** The 1989 Non-Consumptive Practices amendment to the Judgment allows, at the discretion of Watermaster, extraction without the production

---

<sup>8</sup> July 1 through June 30

<sup>9</sup> [www.water.ca.gov/watermaster](http://www.water.ca.gov/watermaster)

<sup>10</sup> Judgment Paragraph VI

counting against the petitioner's production right. The following entities extracted water for oil recovery or basin cleanup projects:

- Mobil Oil Corporation (Oil Recovery) pumped 388.15 acre-feet of water as part of a hydrocarbon cleanup program.
- California Water Service Company (Dominguez) pumped 1,294.49 acre-feet of water from its West Coast Basin Desalter Project (Brewer Desalter) well.
- On December 28, 2011, Shell Oil Company was granted a Non-consumptive Water Use Permit (NCWUP) for 600 acre-feet per year for the period of July 1, 2011 through June 30, 2017, for a groundwater remediation operation at its plant in Carson. Shell Oil Company pumped 170.03 acre-feet this fiscal year.

In addition, Montrose Chemical Corporation of California applied for a NCWUP for 1,300 acre-feet per year for 50 years for a groundwater remediation project. The permit is currently under review by Watermaster.

**Status of Extraction Wells** In the West Coast Basin, there are 73 active extraction wells and 49 inactive extraction wells that have been reported to Watermaster. Figure 4 shows the locations of the active extraction wells. Table 8 identifies extraction wells completed or destroyed. Four wells were reported completed this year, and nine wells were reported destroyed.

**Meter Testing Program** Accurate measurement of groundwater extractions is necessary for the successful management of groundwater in the West Coast Basin.<sup>11</sup> Therefore, the goal of Watermaster is to calibrate the water meter at every active extraction well at least once every two years. Watermaster requires that meters have registration accuracies within plus or minus 5 percent. All available means, including system efficiency tests, are used to confirm water meter test results. Inaccurate meters must be repaired or replaced within 30 days of the date of notification by the Watermaster. Follow up tests on repaired meters and initial tests on new meters are scheduled whenever necessary.

This year, Watermaster visited 22 parties and performed 34 meter tests. One meter was slow (7.5 percent) and all other meters tested had registration accuracies within plus or minus 5 percent. At four well sites, the well discharge pipe lacked a test point and the responsible party was required to install an acceptable test point. This year, Watermaster performed investigations at 39 well sites. Watermaster investigates situations such as new well completions, sudden cessation of pumping, and illegal pumping.

---

<sup>11</sup> Judgment Paragraph XII, 2 authorizes the Watermaster to require parties to install and maintain operative water meters at their wells.

## Water Supply

**Precipitation** During 2011-2012, 7.61 inches of precipitation were measured at Los Angeles International Airport and 7.75 inches at Long Beach Airport; no data were available for Torrance Airport. Figure 1 shows the locations of these precipitation stations. The mean precipitation over the West Coast Basin was 7.68 inches, which is 61 percent of the long-term mean of 12.64 inches. Figure 3 shows the mean monthly precipitation at these stations.

**Groundwater Recharge** Replenishment of groundwater in the West Coast Basin occurs primarily by underflow from the Central Basin, which bounds the West Coast Basin on the east. Water spread in the Central Basin percolates into aquifers there, and eventually some groundwater crosses the Newport-Inglewood Uplift to replenish the groundwater in the West Coast Basin (Figure 1). Although the recharge water is not directly applied to the West Coast Basin, this recharge process returns large quantities of water to the Basin by substantially increasing the natural subsurface flow from the Central Basin to the West Coast Basin. Water injected in the sea water intrusion barrier projects also contributes greatly to the replenishment of the West Coast Basin (see Sea Water Intrusion Barrier Projects).

Table 9 shows sources and amounts of replenishment water. During 2011-2012, Los Angeles County Department of Public Works (LACDPW) spread 105,165 acre-feet of water in the Montebello forebay. The amount of water spread this year was 39 percent less than the amount spread in 2010-2011. The Water Replenishment District of Southern California (WRD) purchased 13,082 acre-feet of seasonally discounted spreading water in July and August 2011 for spreading and replenishment. Since August 2011, the Metropolitan Water District of Southern California (MWD) discontinued the delivery of discounted water for groundwater replenishment.

**In-Lieu Replenishment** During the 1965-1966 water year,<sup>12</sup> the WRD began a program of in-lieu replenishment. Any producer with access to supplemental water may use additional supplemental water in lieu of pumping groundwater (*in-lieu replenishment water*). The use of supplemental water in lieu of pumping groundwater does not change a party's Adjudicated Right.<sup>13</sup> The program may be used to (1) alter pumping patterns within the Basin, (2) replenish areas of low transmissivity where conventional recharge techniques are ineffective, (3) heighten the effect of injecting water to form a sea water barrier by reducing nearby extractions, (4) reduce the amount of replenishment water purchased by WRD, or (5) reduce the annual groundwater extractions from the Basin. Table 10 shows there was no in-lieu replenishment program during this fiscal year.

**Sea Water Intrusion Barrier Projects** Sea water intrusion into the West Coast Basin from Santa Monica Bay and from the San Pedro Bay has been effectively halted by the West Coast Basin Barrier Project<sup>14</sup> and the Dominguez Gap Barrier Project,<sup>15</sup> respectively (Figure 1). LACDPW, which operates the barrier projects, injects both

<sup>12</sup> October 1 through September 30

<sup>13</sup> Water Code Section 1005.1

<sup>14</sup> The West Coast Basin Barrier Project includes a line of 153 injection wells and 300 observation wells

imported water and recycled water into the barriers to create pressure ridges to prevent the movement of seawater into the Basin. Figure 6 shows the chloride content in the Silverado aquifer in the vicinity of the West Coast Basin Barrier. Table 11 and Figure 7 show the amounts of imported and recycled water injected into each of the barriers.

**Groundwater Desalter Projects** In 1993, the West Basin Municipal Water District (WBMWD) constructed the C. Marvin Brewer Desalter Treatment Facility in the City of Torrance. The desalter, which has the capacity to treat 1.5 million gallons of brackish groundwater per day, is operated by the California Water Service Company. The desalter was built to demonstrate desalting technology and to improve groundwater quality and management.<sup>16</sup>

In 2001, WRD began operating the Robert W. Goldsworthy Desalter located in the City of Torrance.<sup>17</sup> It is desalting approximately 210 acre-feet of saline groundwater per month. The extractions contained more than 1,000 ppm of chloride through March 2006, but the chloride concentration has been less than 1,000 ppm since then. Effective April 23, 2007, the City of Torrance began using its water rights to operate the desalter.<sup>18</sup>

**Recycled Water** Recycled water is both a component of the replenishment water for West Coast Basin and of the water supply for the area overlying the Basin (Figure 3). Discharges from the San Jose, Whittier Narrows, and Pomona water recycling plants (Figure 1) contribute to groundwater recharge in the Central Basin, and some of that groundwater subsequently flows into and replenishes the West Coast Basin (Table 9). In addition, the WBMWD water recycling plant in the City of El Segundo annually recycles 70,000 acre-feet of effluent from the City of Los Angeles' Hyperion treatment plant. That recycled water is used for industrial purposes, landscape irrigation, and injection into the sea water intrusion barriers. Table 12 shows that a total of 28,380 acre-feet of recycled water was used in 2011-2012.

**Imported Water** For the area overlying the West Coast Basin, imported water has been the largest component of supply since the mid-1950s (Figure 3). Table 13 shows sources, users, and quantities of imported water. During 2011-2012, parties and two nonparties (California-American Water Company and LACDPW) imported a total of 169,446 acre-feet of water. California-American Water Company, a nonparty, pumped and imported 2,526.59 acre-feet of water from Central Basin and imported 901.80 acre-feet from WBMWD.

---

that runs inland from and roughly parallel to the coastline between Los Angeles International Airport and the Palos Verdes Hills.

<sup>15</sup> The Dominguez Gap Barrier Project includes a line of 94 injection wells and 257 observation wells trending northeastwardly between the 110 freeway and the 710 freeway.

<sup>16</sup> Amendments to the Judgment in 1992 and 1997 specify that groundwater may be extracted from the Brewer Desalter without such extraction being debited against the Adjudicated Rights of any Party.

<sup>17</sup> Amendments: August 30, 2001; June 24, 2002; November 9, 2006.

<sup>18</sup> Amendment: July 24, 2007.

## Quality of Imported Water

Constituent	Colorado River Water <sup>19</sup> (mg/L)	State Water Project Water <sup>20</sup> (mg/L)
Chloride	87	52
Sulfate	222	48
Hardness (as CaCO <sub>3</sub> )	278	111
Total Dissolved Solids	581	244

**Exported Water** No groundwater was exported from the Basin. California Water Service Company exported purchased water from the West Coast Basin to portions of its service area in the Palos Verdes Hills.

**Groundwater Levels** The volume of groundwater stored in the West Coast Basin is constantly changed by variations in subsurface inflow and outflow, barrier recharge, extractions, and, to a lesser degree, precipitation. The Silverado aquifer, which extends laterally throughout most of the West Coast Basin, is the most productive aquifer in the Basin. Ranging from 100 to 500 feet in thickness, the Silverado aquifer yields 80 to 90 percent of the groundwater extracted annually.

Each fall and each spring, Watermaster measures the depths to the static groundwater in more than 100 wells in the Basin. These measurements, together with groundwater elevation data obtained from WRD, are used to prepare groundwater elevation maps for fall (Figure 8) and spring (Figure 9).

Figure 10 shows changes in groundwater levels between spring 2011 and spring 2012. Between spring 2011 and spring 2012, groundwater levels rose as much as 9.8 feet between Carson and Long Beach and declined as much as 14.6 feet in Lawndale.

Figure 11 shows the locations of wells selected to monitor the long-term groundwater elevation trends in the Basin. Figure 12 shows long-term groundwater levels in wells perforated in shallow aquifers in the Basin. Figure 13 shows long-term groundwater levels in wells perforated in deep aquifers in the Basin.

## Watermaster Income, Expenditures, and Budget

The Judgment requires Watermaster to report its income and expenditures.<sup>21</sup> Table 14 shows that Watermaster income from billing was \$316,570 and normal expenditures were \$273,497.<sup>22</sup> Watermaster also separately bills applicants for Non-Consumptive

<sup>19</sup> at Lake Mathews

<sup>20</sup> at Castaic Lake

<sup>21</sup> Judgment Paragraph XII, 6

<sup>22</sup> Annual surpluses or shortages are always carried forward to the subsequent Watermaster fiscal year.

Water Use Permits evaluations. Applicants pay the entire cost of the evaluation (Table 14).

The Judgment requires Watermaster to prepare an annual budget.<sup>23</sup> The tentative budget of \$305,000 was mailed on April 26, 2011, and it became final on June 1, 2011. Table 15 shows the approved budget, and Table 16 shows the apportionment of the budget among the parties.<sup>24</sup>

### **Significant Water-Related Events**

The right to store water in the West Coast Basin for later extraction was not specifically included in the Judgment language. In 2009, some of the parties to the Judgment filed motions to amend the Judgment to allow groundwater storage.

On April 9, 2010, Los Angeles Superior Court Judge Conrad R. Aragon<sup>25</sup> denied the motion to amend the Judgment. Judge Aragon stated that his approval of the motion would result in bypassing all the statutory effects of CEQA review and, therefore, would be unacceptable.

On June 7, 2010, the proponents of the amended Judgment filed a notice of motion to appeal Judge Aragon's ruling. On September 27, 2011, the Court of Appeal issued a decision reversing his ruling.

On October 12, 2011, opponents of the amended Judgment filed petitions with the Court of Appeal for a rehearing. However, the Court of Appeal denied the petitions for rehearing.

In early November 2011, opponents of the amended Judgment filed petitions for review by the State Supreme Court. On or about December 22, 2011, the Supreme Court announced that the petitions for review were granted. However, on May 9, 2012, the Supreme Court dismissed the petitions for review and ordered the publishing of the September 27, 2011, decision of the Court of Appeal.

---

<sup>23</sup> Judgment Paragraph XII, 4

<sup>24</sup> Judgment Paragraph XII, 5

<sup>25</sup> Judge Aragon retired in February 2011.

<sup>1</sup> See Tables 5 and 6 for information concerning leases, transfers of adjudicated right, or prior ownership. Lease with flex includes carryover provisions.  
<sup>2</sup> Allow able Extraction = Adjudicated Right + Carryover + Leases  
<sup>3</sup> Balance = Allow able Extraction - Amount Pumped - In Lieu  
<sup>4</sup> Effective in fiscal year 2004-2005, Western Water Service Co. became a party with zero Adjudicated Rights for the duration of its long term lease with Chevron USA, Inc., which ends on June 30, 2013.

Party ID	Party whose extractions are exempt	Amount Pumped

**Table 4 – Overextractions<sup>1</sup>** (acre-feet)

Party	Adjudicated Right	Allowable Extraction <sup>1</sup>	Amount Pumped	Overextraction <sup>2</sup>	Allowable Overextraction <sup>3</sup>
California Water Service Company (Hawthorne Lease)	0.00	2.00	312.79	310.79 <sup>4</sup>	2.00
Chandler's Palos Verdes Sand and Gravel Co.	294.20	244.90	266.04	21.14	29.42
City of Manhattan Beach	1,131.20	2,135.55	2,147.88	12.33	113.12
Pacific Crest Cemetery Company	39.40	47.28	83.63	36.35 <sup>4</sup>	3.94
Roman Catholic Archbishop of Los Angeles	72.30	243.44	407.85	164.41 <sup>4</sup>	7.23
<b>Total</b>				<u>545.02</u>	
<sup>1</sup> See Table 2 for derivation. <sup>2</sup> Overextraction = Allowable Extraction - Amount Pumped <sup>3</sup> Computed as 2 acre-feet or 10 percent of Adjudicated Right plus carryover provisions, whichever is greater. <sup>4</sup> Violation of Judgment. The party is required to eliminate the overextraction by leasing water, purchasing water from the Exchange Pool, reducing pumpage, or purchasing imported water.
